

## RUGGEDrive™

What if your memory solution could withstand the toughest of treatment, was impervious to liquids, could endure some of the harshest chemicals on earth and still lived to tell the tale?

With RUGGEDrive™, it can.

If you're looking for an alternative to USB and SD that actually lasts, then look no further than the RUGGEDrive.

Not only does the RUGGEDrive protect your data by preventing standard USB and SD connectors from reading it, it's also one of the strongest and most durable memory solutions in the entire world.

### Why Should You Use RUGGEDrive?

**Benefits include:**

- **Reduce your support costs.** Your customer will be unable to use any unqualified devices in your product, greatly reducing the risk of technical support being needed.
- **Reduce your downtime.** These tokens are built to work in the harshest environments possible, meaning less downtime for your organisation.
- **Increase your revenue.** The rugged memory tokens will provide you with an additional revenue stream, and your overall operation will be more streamlined.
- **Experience peace of mind.** Conventional devices can't be used with the RUGGEDrive – your data will be safer than houses.

## Why RUGGEDrive tokens are trusted by organisations all over the world.

You can get RUGGEDrive tokens in two ranges – one with an SD memory range, and one with a USB, both in memory capacities from 4GB to 64GB.

**When you choose RUGGEDrive, you can be sure that:**

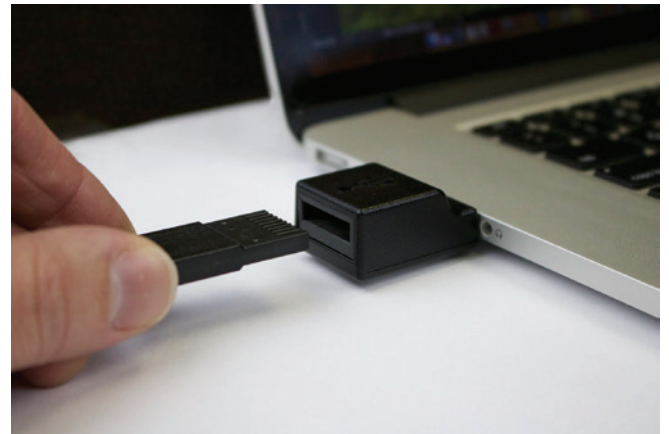

- They're built to last
- They're impervious to liquids
- They can withstand chemicals
- They can be inserted either way up

## What if I need to connect a RUGGEDrive token to a PC?

Thankfully, there's no issue with RUGGEDrive – you can easily connect your token to a PC through a simple connection adaptor that we'll supply you with.

So whilst it's easy for you to get the information you need, no one else can get their hands on the data without a unique Datakey connector interface, giving you ease of use and peace of mind that your data is safe.
